

HAAD EHSMS

All Healthcare Providers are required to develop, implement and continuously update a Healthcare Provider waste management system.

JCI STANDARDS

1. The hospital reduces the risk of infections through proper disposal of waste.
2. The hospital has a program for the control and disposal of hazardous materials and waste.

"Waste generated from clinics, dentistry, hospitals and other health care providers can pose danger to those who come in contact with and hence need to be managed properly. All waste generated from these facilities are, however, not hazardous and can be reused and recycled."

- Tadweer
(Center of Waste Management - Abu Dhabi)
